

Abstract

In order to provide a polylactic acid polymer composition to be thermoformed and a polylactic acid polymer sheet to be thermoformed which show good formability during thermoforming while maintaining impact resistance and heat resistance, and a thermoformed article obtained from the polylactic acid polymer sheet, according to the present invention, a polylactic acid polymer composition is used which comprises a mixture of an essentially amorphous polylactic acid polymer and a crystalline polylactic acid polymer, wherein the essentially amorphous polylactic acid polymer is present at the rate of more than 50% of the crystalline polylactic acid.
